

# Half-Term Treasure Hunt

No school for a week? No need to feel bleak  
Here is a list of treasure to seek...

Something in bud  
Some footprints in mud

Moss on a tree  
A stump older than me

Three different birds  
That like to be heard

Something in bloom  
Any kind of mushroom

Fluffy clouds at dawn  
Clots of frogspawn

One tiny beast  
One wearing a fleece

Tick these off this week  
For a winning streak

Get outside in the sun  
Get some air and have fun

## Notes for the Grown Ups

This has been written for February half term in the UK and Ireland so everything on the list should be (relatively) easy to find.

Trees and flowers are starting to come into bud even if everything is still looking a bit sleepy.

For footprints in mud, so far this month we've found birds, deer, dogs and sheep. Human footprints will work too!

Mossy trees are everywhere and any tree stump will do — the rings are easier to count on freshly cut trees but exact numbers not required

Plenty of birds around at the moment — the noisiest likely to be robins, blackbirds and sparrows. Lots of raucous seagulls and ducks around too of course.

Trying to hear the differences in how the birds sound can be a great exercise in presence and being in the moment. Just as beneficial for parents as for kids, especially after (another) six weeks of homeschooling

For blooms, there should still plenty of snowdrops and some daffodils should flower any day now. Bonus points for anything else you can find in February.

Dawn is at 8am these days so not too early to look out the window to see lovely pink clouds — sunrises are very beautiful at the moment (assuming the sun obliges of course). Did you know that getting outside into natural light early in the morning can help wake you up by flushing out all the sleep hormones in your system? In turn, this helps regulate sleep later in the day.

Frogs should be spawning anytime now – look in still(ish) water — we've found them in ditches, ponds and puddles.

There are lots of mushrooms in wooded areas, the easiest to find will probably be 'turkey tails', these are multi-coloured fungi that grow on tree trunks and fallen trees in wooded areas.

Not so many insects around at this time of year but still dung beetles, spiders and woodlice. Lift up stones or look under wood or leaves to see what pops up.

Something wearing a fleece was included purely for rhyming purposes. Adults dressed in outdoor gear will constitute a correct answer if you aren't near any sheep.

Just a bit of fun to get kids outside and see what they can find in the natural world this half term. When life has been reduced to screens for school, socialising and entertainment, it's great to get out into nature and reconnect the big beautiful world around us.

## Say Hello!

If you do play along, feel free to tag me on IG @wellderness #wellderness or @welldernessproject on Facebook so I can see how you get on.
